

To whom it may concern:

The Peak Apartments www.thepeakapartments.com.au are Sydney's first 5 star Residential Resort development located above Paddy's Markets & Market City in the Sydney CBD. The strata recently undertook renovations to the buildings main entrance front fascia panels which were originally built from cement sheeting with a Granosite surface texture. The "before" photos show obvious signs of delamination, wind and water damage over the last 11 years since construction.

We chose MultiPanel as the most suitable product for 3 main reasons below –

1. 100% waterproof product which would withstand environmental stress from wind, rain & sun
2. Flexibility to form an "S" curve profile to contour to the original fixing battens
3. Light weight making it easy to install and with less structural load on supports

Other factors which also contributed were the wide range of available thicknesses and its ability to be painted, sanded and cut without special tools or techniques. We believe the "after" photos are proof that MultiPanel offers the best combination of features for exposed outdoor environments.

Yours sincerely,

Vaughn de Vocht
Building Manager
