

10/01/07

Hi Josephine,
Brandi + Co have moved from Carlton, the building shown in the photos is at 231-233 Punt Road Richmond.

When I first came across Multipanel at Designex a few years ago I recognized its potential to be used for carving signage. This crest is the first chance I had to put it to the test. I found that the high density foamed urethane allowed for very predictable carving pressure to be applied. It carves beautifully using normal woodworking carving chisels. I was particularly pleased with the how cleanly the lettering could be carved using Multipanel. The crest was carved in Multipanel, and finished in Porter's Limewash to give it the right marble / concrete appearance. The lettering is carved and gilded with gold leaf.

I'm looking forward to using this versatile product on many more of my 3D sign projects.

Regards Tony Mead
